

LETTER OF APPRECIATION TO WHOMSOEVER IT MAY CONCERN

We take this opportunity to extend our appreciation to Divij Kapoor for successfully completing the Young Technology Scholars (YTS) Summer Program organized by Reimagining Higher Education Foundation from June 13 to June 28, 2020.

Young Tech Scholars is an intellectually intensive and stimulating program based on a curriculum which reimagines technology education to make it more interdisciplinary, hands-on and oriented to problem solving. We had to take the program online this year due to the social distancing norms and other safety measures enforced against Covid 19 pandemic. The YTS Plenary Lectures were delivered by Dr. Ravi Jasuja (Director of Translational Research & Discovery, BWH, Harvard Medical School), Prof. Hanumant Singh (Director of Center for Robotics at Northeastern University, former MIT-WHOI scientist), Dr. Jitendra P. Khatait (Faculty, Department of Mechanical Engineering, IIT-Delhi) and Dr. Hanumant Singh Shekhawat (Faculty, Department of Electronics & Electrical Engineering, IIT-Guwahati).

This first-of-its-kind summer program was curated to provide a select group of bright students an opportunity to work on solving real-world problems under the guidance of world-renowned faculty. The students were selected through a rigorous admission process.

We were glad to have Divij in the YTS 2020 cohort. Divij's intellectual tenancies were evident in his interactions and his tangential thinking stood out during the program. His focus and determined attitude gave him an edge in the execution of tasks at the program. He worked on the development of the Human-Robot interface using EMG signals. We are proud of his successful completion of the project and appreciate the collaborative effort that went into building the same.

We once again congratulate him and wish him success in all his future endeavours!

Good luck!
